Software for  
Event-Driven,  
Intelligent  
Visualization

**SEE**

**SHARE**

**RESPOND**

Activu **vis|ability** is the software platform that empowers people to **see, share, & respond** to visual information, collaboratively, and with context.

Vis|ability, empowers operators & leadership to securely manage mission-critical operations within the control center & beyond.

▢ See

Easily introduce and manipulate content **Sources** in the control room, to assemble a common operating picture that can be displayed on video walls, desktops, conference room displays, mobile devices, and more. Any type and number of Sources are available over the network: enterprise applications, video, actual or virtual computer screens, web sources, mobile devices, or local applications.

↔ Share

In whole or part, share the contents of the common operating picture. Whether the actual content is on a display, or virtually arranged in **Spaces**, it can be shared anywhere: from the video wall to other rooms, to other offices, or bidirectionally to and from authenticated mobile devices.

▲ Respond

Systems which are common in control operations—video management, access control, IT service management, process historians, SCADA—are interconnected through the Activu platform. Vis|ability users can easily setup threshold conditions that instantly trigger the display of sources and messages on the video wall or any screen automatically, separating signal from noise—improving incident response—focusing your team on what matters.

A common operating picture for the control room, across the enterprise, to the field, to teams across the region, or around the world.

# activu | vis|ability® Tour

## System Manager

Orchestrates all sources, displays, and authenticated users across the network. Smoothly integrated into your security and IT management environment.

## Crisis Room

Share a focused subset of content to other displays and command centers for breakout groups and management teams.

## Mobility

Collaborate with colleagues and access real-time critical information, anywhere. Stream live video & send photos from the field.

## Sources

All your critical content in one place: Applications, web pages, live streaming video, network desktop kvm, & documents.

## Spaces

Collect related information to create a common operating picture on virtual video walls, and share anywhere in your organization.

## People

Collaborate fluidly using any content in your organization: Desktop to desktop, video wall or mobile. Integrated chat and whiteboard.

## Displays

Manage content and control its display from anywhere to anywhere—video walls to conference room displays to desktops to mobile devices.

## Automated Alerting

Tools that connect to your information environment and enable automated visualization, ensuring no critical event is missed.

The vis|ability user interface allows complete control of your common operating picture from a single point. View, manage, collaborate, and control visual information across video walls, desktops, & mobile devices through an elegant and friendly workspace.
